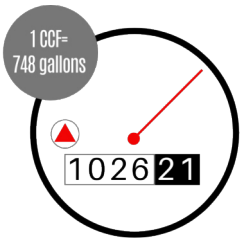
HOW TO CALCULATE YOUR BILL:



EXAMPLE:
1026 - 1016 = 10CCF
10CCF x 748 = 7,480 Gallons

Your meter has a number displayed similar to the one pictured above. Read the number from left to right. Numbers with a black background are not used in the calculation of your monthly water consumption.

Subtract the prior meter reading (provided in your statement) from your current reading. The results will indicate the amount of water used in CCFs - hundred cubic feet. To convert this usage to gallons multiply the amount by 748.
